

REM ASSOCIATES designs, develops, and implements systems that lead to increased revenues and reduced expenditures in today's competitive business environment.

Today, most businesses have desktop computers that have more processing power than most mainframe computers had decades ago. Unfortunately, businesses are utilizing only a fraction of this potential resource.

The decline of the mainframe industry has led to the expansion in the personal computing market. This has led to a massive increase in the amount of sophisticated software applications available that convert ordinary desktop computers into effective tools for business.

SERVICES PROVIDED

REM ASSOCIATES understands the importance of providing a full range of staged services to its clients.

STAGE I

- Technology Appraisal
- System Specifications

We will examine the current hardware status of an organization. We will then suggest any necessary upgrades of out-dated hardware or software. Following that, assistance will be provided in the creation of system specifications for a given project.

STAGE II

- Software Design
- Software Development

Following the specification stage we will design and develop the project with continual operations design input from the client.

STAGE III

- System Integration and Implementation
- System Documentation
- System Training
- Ongoing Maintenance

After the completion of the development stage REM ASSOCIATES will assist in the installation and troubleshooting of each project. Full documentation and training is provided for the lifetime of the project. We will maintain the systems once they are in place. This will include all modifications and upgrades.

Our desktop computing systems address business needs ranging from sourcing and inventory management through forecasting to business operations controls. Our team has a proven record of solving all types of business and organizational problems by integrating today's advanced hardware and software technologies.

EXPERTISE

REM ASSOCIATES understands the importance of providing a full range of services to our clients. Our application development services include design, development, implementation, and support of custom software for solving a variety of business and organizational problems. We specialize in the development of applications which integrate advanced hardware and software technologies on a variety of computing platforms. Using Microsoft Visual Basic and Visual C++ as our primary development tools along with other products such as Microsoft Access, Excel, and SQL Server we deliver quality desktop computing solutions that address the needs of business operations management.

Our data processing experience includes expertise in PCs, Macs, Workstations, and Networks. Our software expertise lies primarily in Microsoft products including, but not limited to:

- Windows 3.11/95/98
- Windows NT
- Macintosh System
- Visual Basic
- Access
- Excel Macros
- Visual C++
- HyperCard
- SQL Server
- DBase IV

BUSINESS APPLICATIONS

- Sales Forecasting
- Inventory Management
- Management Reporting
- Technical Reporting
- Vendor Management
- Quality Control

* * * * *

REM ASSOCIATES believes the key to business management of the '90s will be the successful implementation of effective systems and management controls that will provide management with the tools to improve the management decision process.
